qwikWare™ and megaWare™ PC Requirements

Csoft qwikWare™ and megaWare™ application suites all run on multiple devices, databases and Windows operating systems. Although the applications will run on multiple PC platform configurations, the preferred configuration for all Csoft applications is as follows:

- Xeon Processor
- 256 MB RAM
- 17” Monitor that can display a minimum of 1024x768 screen resolution.
- 100 GB Hard disk. Base application engine takes about 100 MB; the extra disk space depends on data and backup / archiving requirements.
- Windows XP / Windows Vista

qwikWare™ and megaWare™ Server Requirements

Platform	Description
PC-PROCESSOR	Dual Core Xeon 1.6 GHZ processor at the minimum, Xeon 3.0 GHZ for optimum performance. A minimum of 2 processors should be used...
PC-RAM	4 GB RAM at the minimum, but performance will increase dramatically with extra RAM, so the more the better. Because Csoft applications are engine-based to provide maximum configurability, the more memory that can be added to the system will aid application performance.
PC-MONITOR	17” Monitor at the minimum that can display a 1024x768 resolution. A larger monitor is preferred. The more resolution that can be obtained can be helpful for viewing larger screens. 1280x1025 is the optimal resolution for Csoft applications.
PC-DISK	250 GB Disk space at the minimum for the application engine and data. Disk space will be determined mostly by the size of the database.
PC-CD	CD-ROM to load software if chosen media is a CD-ROM.
PC-PORT	USB Port capable of loading info on the hand-helds. This port will be used for data transfer in Batch mode installations, and unit reloading on Radio Frequency mode installations.
DOS-RAM	1-2MB RAM at the minimum. 2-4MB RAM is preferred so that there is plenty of RAM for the engine. RF installations only require 2MB.

Configurable Software Solutions...

qwikWare™ and megaWare™ Hand-Held Memory Requirements

Platform	Description
POCKET PC-RAM	64 MB RAM at the minimum. 64MB RAM is preferred so that there is plenty of RAM for the engine. RF installations only require 32MB.
WIN MOBILE RAM	64 MB RAM at the minimum. 64MB RAM is preferred so that there is plenty of RAM for the engine. RF installations only require 32MB.
PALM-RAM	32 MB RAM at the minimum. 64MB RAM is preferred so that there is plenty of RAM for the engine. RF installations only require 32MB.
DOS-RAM	1-2MB RAM at the minimum. 2-4MB RAM is preferred so that there is plenty of RAM for the engine. RF installations only require 2MB.
